

## NETWORK INTERFACE CARD

MODEL NO: CFS-NIC300

### DESCRIPTION:

The **Network interface card** is used to form a ring network of **Alco control panels and repeaters**. Robust data communications uses separate transmit and receive transmission paths to provide superior reliability. The transmission paths are constantly monitored for fault conditions in the wiring. **A single fault will continue to allow network communications.**

The **network interface card** provides fire detection and **alarm system** designers with a flexible solution to provide multiple Networked systems for *life safety and property protection applications*.

### TECHNICAL FEATURES:

- RS-422/RS-485 data communications protocol
- Ring topology
- Monitoring of short- and open-circuit conditions in the transmission path
- Fault-tolerant transmissions allows continuous data communications with a single fault in the transmission path
